

Paper Grass Sprouts

What you'll need:

- green construction paper
- wire cutter
- scissors
- glue stick
- 20-gauge floral wire (18" long)

What you'll do:

Step 1: Cut blades of grass by cutting deep, narrow V's, leaving a 1" uncut margin at the edge of the paper. Do this the entire length of the paper. (We cut several pieces of paper at a time.)

Step 2: Lay a cut blade piece down flat. Cover the 1" margin with glue.

Step 3: Lay a floral wire in the glue; trim the wire if necessary. Press another blade piece on top, sandwiching the wire between the two blade pieces. Line up the bottom edges to ensure the grass will stand up on its own.
